

# CAMFUNCTION DATASHEET

## (Covers IP, Standard and Pro versions)

**CAMFUNCTION** is a software package that allows control of multifunction dome cameras, telemetry receivers, IP cameras / IP video servers, video matrix/switchers and video recording devices using a PC. The cameras can be controlled by mouse/touchscreen via the on-screen 'joystick', PC keyboard or by a physical joystick which is connected to the back of the PC.

**CAMFUNCTION** includes a map layout facility which displays a map of the premises including the location of all cameras. Simply select a camera either by using the camera select list or click one of the camera icons displayed on the map. This makes it easy for the operator to know exactly where the cameras are positioned, even if they are new to the CCTV system. 'Hot spot' icons on the map can also trigger multiple cameras in the area to turn and view specific points on the map (Ideal for following suspects in retail environments).

**CAMFUNCTION** also offers VCR/Digital recorder controls, allowing integration of the whole CCTV system through a single on-screen interface. This reduces the desk top space required and allows the VCR to be positioned in a secure area.

Many of the selection buttons can be titled giving the operator a clear indication of their function. This vastly reduces operator training times, as well as mistakes made by "finger trouble" on the part of operators; a common problem in security system management. You can even have up to sixteen user configurable buttons on the main operators screen to trigger function keys adding a personalisation which previously could only be achieved through expensive bespoke programming. To ensure security of the system each operator has their own password and functions available to them.

Function keys can be created to do a number of operations with a single key press. Features such as camera and preset selection, snapshot, VCR commands and tour selection can now be triggered by a keyboard or on-screen button. These function keys can also be triggered by timers at programmable times.

Images can be displayed on CCTV monitors or the PC screen when the CCTV Grab video capture card is used. When using the CCTV Grab card **CAMFUNCTION** has a snapshot feature which enables you to store a particular picture on to the hard disk. The software can be set to grab snapshots at selected intervals. **CAMFUNCTION** has a built in playback viewer which enables pictures to be printed or faxed direct from the PC or saved to floppy disk and emailed.

**Camfunction** has the ability to email a picture to up to 20 email addresses. The email feature can be programmed on to the software's function keys. These can be triggered by an alarm input, keyboard, timers, map icons or on-screen buttons. The email can have a JPEG imaged attached (of an alarm trigger point for example) or just a text message (ideal for mobile phone users). The web upload command can again be put into a function key and is intended for use by anyone who wants to show pictures from CCTV cameras on the internet or intranet. If users have a permanent connection to the internet available (cable modem or DSL) then pictures will be uploaded at a specified rate or the software can be set to make a dial up connection via phone line, upload the picture and then disconnect to save on call costs.

Control over a computer network gives multiple users control of the CCTV system. Control is achieved by connecting the control equipment either to a PC running **Camfunction** OR to a dedicated Video Server (call for list of compatible Video Servers). Additional PCs requiring network control must be running **Camfunction**.

**Camfunction** can interface with non CCTV equipment such as alarm panels or Access control equipment using it's 'generic alarm protocol' via an RS232 or DDE link connection. It can also accept alarm inputs direct to the PC or via compatible alarm panels.

### Camfunction Versions

**CAMFUNCTION** is split into three different versions to be used in different applications:

- **Camfunction IP-** Low cost version for multiple network users, no local port connections only network connections to cameras, video servers and NVRs / DVRs. Does not support Alarm Device functionality. Maximum of 16 IP devices.
- **Camfunction Standard-** Version for controlling up to 32 cameras. Supports Alarm Device functionality. Will also support up to 32 IP devices. Sold with or without capture card.
- **Camfunction Pro-** Version for controlling 33 cameras and above up to 999 cameras. Supports Alarm Device functionality. Will also support up to 999 IP devices. Sold with or without capture card.
- All versions can connect to CCTV Software's digital recording software 'PC Multiplexer' range.

<b>Hardware / Software</b>	<b>Requirements</b>																												
PC & Display	Minimum of Pentium 3 333Mhz or higher with VGA 16bit colours and 1 spare PCI slot.																												
PC Ram	512 MB or above																												
PC Hard drive	Min. 20MB of hard disk space. 80 MB or above if using snapshots.																												
PC CD Rom drive	4x speed or faster																												
PC Control device	Mouse/touchscreen and / or PC analogue joystick (4 buttons).																												
PC Hardware key (dongle) port	1 parallel port or 1 USB port if you order USB version (add -USB to part number for this)																												
PC RS232 Communications ports	1 mouse / touch-screen port, 1 serial port for cameras, 1 serial port for VCR's, 1 serial port for video switching device																												
PC Operating System & Network	Windows 98, 2000, ME, XP or Vista with TCP/IP protocol for network operation
